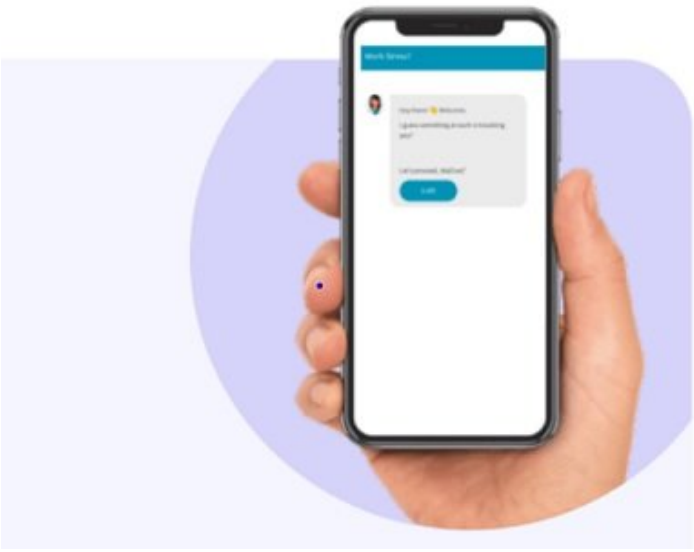
MFine unveils heart rate monitoring tool on its app

03 March 2022 | News

The startup is planning to launch glucose monitoring and blood pressure measurement via its app by the end of 2022



Digital health startup MFine has launched a Heart Rate Monitoring (HR) Tool on its app which enables users to keep track of their heart rate without needing an additional device or any other app.

The company is working on various next-gen AI technologies which convert the mobile phone into a rich diagnostics and vitals monitoring tool. MFine is planning to launch glucose monitoring and blood pressure measurement via its app by the end of 2022.

The tool is in public beta for Android users and will soon be launched for iOS users. MFine is preparing for certifications of its algorithms, with data of hundreds of measurements to give medical-grade accuracy and reliability to the algorithm.
