Nav Wireless Technology extends help to combat COVID-19

10 July 2020 | News

Nav Wireless is the only company in Asia received first commercial project in Li-Fi sector in healthcare sector

Covid-19 patients in isolation wards at Surat Municipal Institute of Medical Education & Research (SMIMER), Surat (Gujarat) will get benefited from the latest Li-Fi technology.

Ahmedabad based Li-Fi technology inventor, Nav Wireless Technology Pvt. Ltd is going to set up Li-Fi (Light Fidelity) technology-based communication facility at SMIMER. The company has extended its expertise to provide speedy, and safer light-based communication for Covid-19 patients and all the medical professionals.

Li-Fi is a mobile wireless technology that uses light rather than radio frequencies to transmit data. In India, Nav Wireless is the only player working on Li-Fi in this segment.

The company has successfully installed such a Li-Fi technology-based communication facility for various government institutions and private premises. With LiFi technology-based solutions, Doctors and Hospital Staff are minimized to the risk of spreading Coronavirus infection & at the same time provide a live health data monitoring system.

“The administration had converted the multilevel parking premises at SMIMER into Covid-19 isolation wards in almost no time. These premises are going to be equipped with the latest Li-Fi technology. We are the only company in Asia in the Li-Fi sector to receive the first commercial Li-Fi project for the healthcare sector. We will set up around 600 such units there which are completely MADE IN INDIA. All the formalities related to this initiative have been completed with respective authority and we will start the commencement of the installation process very shortly", said Mr. Hardik Soni Co-founder & CTO, Nav Wireless Technology Pvt. Ltd.
