Calicut Centre for Surgery partners with Niramai to provide contact-less breast cancer screening

26 October 2020 | News

Niramaiâ??s innovative solution called â??Thermalytixâ??, is an automated breast health screening and diagnostic tool

Dr Ambadi's Calicut Centre for Surgery (CCS) located at Metromed Hospital, Kerela has recently partnered with Bangalore-based NIRAMAI Health Analytix, India's foremost AI-based breast cancer screening company, to offer contactless, privacy-sensitive, breast cancer screening services to customers.

Niramai's innovative solution called 'Thermalytix', is an automated breast health screening and diagnostic tool, which combines thermal imaging with artificial intelligence. The solution is non-contact, radiation-free, accurate, automated, and works on women of all age groups. Given that it is portable and low-cost than other methods, the solution makes cancer screening more accessible and affordable to all.

With this collaboration, women can also avail of home-screening services which will bring this novel non-touch breast cancer screening solution to the door-step of homes reducing the need to go to a hospital during the pandemic. Only female technicians will provide this service following all covid safety precautions and women can avail of this service with a prior appointment.

The test will be conducted in complete privacy without any physical contact. NIRAMAI Thermalytix test is appropriate for women of 18 years and above. It is privacy-aware, non-invasive, radiation-free, and can detect the minutest of lumps or other abnormalities.
