ENTOD Pharma unveils world's first nanotech-based under-eye gel serum

05 May 2022 | News

The serum is based on plant-based biocellular formula

Mumbai-based ENTOD Pharmaceuticals has developed Eyecirque under eye gel serum in collaboration with UK-based cosmetic research laboratory NuSkin London.

Based on an innovative plant-based biocellular formula containing a vitamin A+ C+ E complex, anti-aging antioxidants, skin brightening agents and naturally occurring ultra-moisturising ingredients, the gel gets easily absorbed into the skin around the eyes.

Eyecirque is formulated for all skin types in internationally accredited skin research laboratories. Its ground-breaking nanotechnology-based biocellular formula contains carefully curated, safety tested and scientifically proven plant-based natural ingredients that are thoroughly tested for safety on the skin around the eyes.

Eyecirque is available online and in selected pharmacies and doctor's clinics.
