Systech Europe declares expansion of customer base and pharmaceutical serialization partners ready to meet the FMD regulation

12 January 2018 | News

Systechâ??s innovation has led best practices for key brands across the pharmaceutical, life science, food and beverage, and consumer packaged goods industries

Systech International, the global technology leader in serialisation, track and trace, and brand protection grew its European presence in 2017 by 50% with new accounts in France, Germany, Greece, Turkey, and Finland.

The company also added new Authorized Solution Partners to its global network offering integrated turnkey solutions with Systech UniSeries, the industry standard for serialising products to meet the falsified Medicines Directive (FMD), as well as the Company's expanding track and trace and anti-counterfeiting technologies.

Systech arranged the world's first serialisation and aggregation project in Europe over a decade ago and has now implemented serialisation for 19 of the top 20 global pharmaceutical companies.

With 30 years of industry experience, Systech utilizes award-winning configurable software technology, including vision, serialisation workflow, and number management.

It ensures delivery of quick and cost-effective serialisation solutions to large and small pharmaceutical companies, including multinationals, regional manufacturers, and CMO/CPO's.

Servicepoint Oy, one of Systech's sales and integration partners, is implementing Systech's serialisation solution in Finland for Santen Pharmaceutical, the leading Northern European ophthalmic drug manufacturer.
