AI-powered health-tech startup HealthMir raises seed funding

05 May 2017 | News

With the new capital, the company plans to expand its operations to six more cities in the coming 18 months

Artificial intelligence-driven health content startup HealthMir has raised an undisclosed amount in seed funding from angel investor and insurance industry veteran Nimit Panigrahi.

With the new capital, the company plans to expand its operations to six more cities in the coming 18 months namely Bangalore, Mumbai, Chennai, Chandigarh, Jaipur, and Pune. It will also make the content on its app available in multiple languages.

Through its app, HealthMir provides information on health through videos. It has a library of more than 2,000 videos created around 500 odd health conditions. The app, which is available on the Google Play store and App Store, also allows users to understand their health risks through personalised health trackers. Users can also book a consultation with any of the 2,000 doctors and 100 hospitals that the company has tied up with. It also runs an app called Sympler, where users can discuss their symptoms with a chatbot, while also accessing the consultation and content module. HealthMir also has corporate health solutions.

HealthMir, operated by Trusting Bee Technologies Pvt Ltd, was founded by IIT-IIM alumni Kumar, Rohit Gupta, and Gitesh Gupta along with Dr Praneet Kumar in May 2015.
