

Healthcare data analytics startup raises \$25M

13 May 2018 | News | By Manbeena Chawla

Innovaccer plans to use the latest funds to continue building on its industry-leading suite and go-to-market capabilities.

Innovaccer, a healthcare data analytics startup has raised its total funding to \$41 million, with the recent \$25 Mn Series B investment. The round was led by Westbridge Capital with participation from Lightspeed Ventures.

Innovaccer plans to use the latest funds to continue building on its industry-leading suite and go-to-market capabilities. This includes enhancing its data platform by doubling down on its machine learning capabilities and adding to its already industry-leading 200+ connectors to healthcare data systems.

In addition, Innovaccer will be investing in building a set of new patient engagement applications and platform capabilities for partners to access and build upon InData.

Founded in 2014, the Silicon Valley and Noida-based startup is focused on helping healthcare organisations accelerate innovation by making powerful decisions based on key insights and data-driven predictions.
