

Datwyler to supply first samples of new Pune production line in August

28 May 2018 | News

Datwyler will present newest trends in cleanroom production for pharmaceutical packaging components

Datwyler, the Swiss-based industrial supplier of state-of-the-art solutions for drug packaging and medical devices, will present its best-in-class packaging solutions at the 2018 InnoPack Pharma in Mumbai.

As official speaker at the event, Rahul Dev, Vice President India at Datwyler, will present newest trends in cleanroom production for pharmaceutical packaging components.

The company is currently expanding its state-of-the-art production facility in Pune, which is expected to supply first samples of the new First Line production line in August 2018. Conference attendees can visit Datwyler at booth B1.

With the expansion of its production facility in Pune, Datwyler has set a new milestone for cleanroom production in India and the region.

The facility is now aligned with Datwyler's highest manufacturing standard First Line, a concept dedicated to the production of high-quality elastomer components in a fully integrated state-of-the-art cleanroom environment.

"Incorporating First Line in our Pune facility underscores our commitment to India and the region. The Indian market is of strategic value to Datwyler and our market share is quite substantial", says Rahul Dev, Vice President India at Datwyler. "The Pune facility is our first facility in Asia which is aligned with the First Line standard. This is not only a milestone in the history of Datwyler, but also for cleanroom production in the Asia Pacific region."
