LifeScan upgrades diabetes management app

05 November 2018 | News

The new version comes with functionality to automatically identify recurring highs or lows in the blood sugar and alerts users on their smartphones.

Blood glucose monitoring solutions provider LifeScan has launched a new version of its diabetes management mobile app OneTouch Reveal which now has new features.

OneTouch Reveal is designed to enable the wireless monitoring of blood sugar. Users will also be able to share the results with their healthcare team.

The new version comes with functionality to automatically identify recurring highs or lows in the blood sugar and alerts users on their smartphones.

In addition, the new OneTouch Reveal allows patients to set and track their personalised goals for blood glucose tests, carbohydrates logging and other daily activities.

The app is currently available for use in a total of 24 countries, including Belgium, Canada, France, Germany, India, the US, Italy, Ireland, Spain, the UAE, Poland and the UK.
