

Medical Marijuana launches Real Scientific Hemp Oil

17 January 2019 | News

This product features both CBD and CBDa in a proprietary blend of the company's premium hemp oils, including its RSHO™ Green Label raw CBD oil and RSHO™ Gold filtered CBD oil

Medical Marijuana, Inc., the first-ever publicly traded cannabis company in the United States, subsidiary HempMeds announced today the release of its newest cannabidiol (CBD) product Real Scientific Hemp Oil™ (RSHO™) Maximum Strength.

RSHO™ Maximum Strength is the company's most potent full-spectrum product, containing 4,500 mg of CBD in each 10-gram oral applicator to support overall wellness. This product features both CBD and CBDa in a proprietary blend of the company's premium hemp oils, including its RSHO™ Green Label raw CBD oil and RSHO™ Gold filtered CBD oil. It is also available in one-gram containers.

"We developed Real Scientific Hemp Oil Maximum Strength because of our promise to continuously evolve and lead the industry with quality and innovation," said HempMeds® President Todd Morrow. "This product brings consumers a new level of full spectrum concentration to assist those who can benefit most from a higher concentration oral applicator product. We will continue to drive industry innovation and offer products that stand by our promise to deliver safe, high-quality and meaningful ingestible or topical formulations that can help make a difference for those who benefit from CBD."

HempMeds® was the first company to ever bring hemp-based CBD oil products to market in the U.S. in 2012 -- and the first to both make CBD products available in bulk for U.S. consumers and provide high-quality CBD hemp oil to customers around the world. HempMeds® was also the first-ever company to receive historic federal government import approvals for its CBD products in the nations of Argentina, Brazil, Mexico and Paraguay.
