Clarivate Analytics initiates global Life Science Alliance Program

08 February 2019 | News

New partner ecosystem enables companies to enhance and expand drug and medical device development initiatives

Clarivate Analytics, a global leader in providing trusted insights and analytics to accelerate the pace of innovation, recently launched a Life Science Alliances Program to provide drug and medical device developers with a new way to significantly advance their research and development (R&D) and commercialization initiatives.

The accredited global program combines Clarivate's solutions with those of world-class technology and service providers to deliver intelligence and actionable insights to biopharmaceutical companies and other researchers around the world.

More than ever, drug and medical device researchers are challenged to quickly and efficiently access, synthesize and analyze data from a growing and increasingly complex array of sources across the development lifecycle. Clarivate's Life Science Alliances Program addresses this challenge by enabling greater collaboration and new capabilities, and already features leading service providers in its growing ecosystem, including:

- **Bioinfogate,** a forward-thinking biomedical data science organization focused on the development of innovative products and services for all those involved in the finding of better and safer drugs. By aligning with Clarivate's suite of scientific intelligence, including biology, chemistry and pharmacology information, Bioinfogate will empower its OFF-X translational safety intelligence portal to help researchers and decision makers in pharmaceutical and healthcare organizations to de-risk and optimize their R&D programs.
- **Vitrana,** a dynamic health sciences technology and consulting firm that is driving major advances in the quality, efficiency and cost of clinical research and patient care. Through its partnership with Clarivate, Vitrana has enhanced its HiLIT Platform, which delivers specialized clinical and healthcare information management services, automation, data transformation, standardization and federation, semantic and ontology enabled search, as well as smart and predictive analytics.
- **Waters Corporation**, a leading specialty measurement company focused on improving human health and well-being through the application of liquid chromatography, mass spectrometry, and informatics. Working in concert with Clarivate, the Waters Progenesis QI and Progenesis QI for proteomics statistical software platforms enable the direct transfer of experimental results into biological pathways analytics.

These enhanced capabilities are enabled by Cortellis Cloud, an integrated, scalable technology platform that host Cortellis, Clarivate's suite of life science intelligence solutions. Through Cortellis Cloud, datapoints from thousands of sources are harmonized within a single unified platform, making it the industry's richest resource for data-driven insights and advanced analytics for Life Science professionals.

The Clarivate Life Science Alliances program will expand to include additional partners in 2019 and beyond.
