

Bio-Techne attains ISO certification for FBS manufacturing facility

17 September 2019 | News

Bio-Techne has invested heavily in quality systems and certifications for serum and cell culture products produced at the Atlanta Biologicals facility

Bio-Techne Corporation has attained ISO 9001:2015 certification at its fetal bovine serum (FBS) and specialty media manufacturing facility in Flowery Branch, Georgia. ISO 9001:2015 is an international Business Quality Management System standard that is recognized globally as an indicator of quality excellence. This certification demonstrates Bio-Techne's commitment for providing high-quality serum and media that aligns with the quality excellence standards preferred by biotech, biopharmaceutical and pharmaceutical companies as well as academic researchers.

In January 2018, Bio-Techne acquired Atlanta Biologicals, a leading provider of FBS, base media and cell culture supplements for academic research and development. Since the acquisition, Bio-Techne has invested heavily in quality systems and certifications for serum and cell culture products produced at the Atlanta Biologicals facility. This includes ISO9001:2015 certification, as well as an USDA APHIS (Animal Health and Plant Inspection Services)-certified manufacturing process for Optima FBS. By pursuing and successfully obtaining ISO and USDA APHIS certifications, Bio-Techne solidifies its commitment to supporting the serum needs of high-quality research, development and manufacturing.
