

Wipro, Plexis partner for digital healthcare transformation

16 March 2020 | News

This partnership will enable a streamlined, efficient, accurate and integrated plan administration solution to support healthcare payers and plan sponsors worldwide.

Wipro, a leading global information technology, consulting and business process services company, has announced its global strategic partnership with PLEXIS Healthcare Systems.

This partnership will enable a streamlined, efficient, accurate and integrated plan administration solution to support healthcare payers and plan sponsors worldwide. The aim is to offer secure, compliant, high-value, end-to-end “digital-first” plan administration solutions at a cost-effective price point along with enhanced customer experience. The partnership will initially focus on supporting Medicare and Managed Medicaid programs but will expand to support Accountable Care Act and commercial lines of business.

At its core, Wipro’s Medicare platforms will combine with PLEXIS’ healthcare payer claims and care management platforms, to deliver a state-of-the-art technology backbone. This will enable Wipro to deliver world-class Business Process as-a-Service (BPaaS) for efficient and effective management of the entire value chain including enrollment processing with Centre for Medicare and Medicaid Services (CMS) member billing, fulfilment, care management, claims to process and Encounter Data Processing to CMS.

Wipro-PLEXIS partnership will provide Medicare and Medicaid plans, a CMS compliant, easy and affordable turnkey option, with a focus on member satisfaction, improved care outcomes, data collaboration and reduced administrative costs.
