DIVOC launches first telemedicine diagnosis lab in India

28 August 2020 | News

Through the new-age labs of the future, it facilitates patients to have a lab at the comfort of their homes

DIVOC health has launched its first, one-of-a-kind, technologically advanced DIVOC laboratories in New Delhi to create the most advanced digital diagnostic laboratory network. Through the new-age labs of the future, it facilitates patients to have a lab at the comfort of their homes.

It has also introduced at-home, instant diagnostics which would allow phlebotomists to conduct testing and deliver results right away. The lab has collaborated with United Kingdom laboratories to bring 21st-century innovations into diagnostics. With faster results i.e within 20 minutes at home, DIVOC is also empowering and enabling the overall telemedicine segment in India.

This innovation will enable a new generation of medicine where the operations can extend into peoples' homes and the diagnostic continuum can empower a truly connected, omnipresent vision of health. DIVOC laboratories offer more than 500 tests including Clinical Chemistry, Clinical Microbiology, Hematology, Serology, Clinical Microscopy, Cytopathology, and Molecular Biology.

DIVOC Laboratories offer more than 500 tests including Clinical Chemistry, Clinical Microbiology, Hematology, Serology, Clinical Microscopy, Cytopathology and Molecular Biology

DIVOC Laboratories has set up a state of the art facility in Okhla, New Delhi which can enable a variety of testing. Facilitating people with telemedicine, the lab of the future will provide Instant Home Kit, Drug Delivery and also, work with existing aggregators to provide Doctors. To bring the latest innovations, advanced concepts and technology for the benefit of clinics and patients, the Divoc labs focus on validation, knowledge management, new technology evaluation, new assay development, R&D and contract research.
