Oncquest acquires Quest Diagnosticâ??s Indian facilities

01 September 2020 | News

Quest diagnosticâ??s Gurugram facility built with the best global standards in the year 2008 is one of the largest lab facilities in Asia

Oncquest Laboratories, India's leading and fastest-growing chain of super-specialized laboratories has recently announced the acquisition of world-renowned Quest Diagnostic's Indian facilities, from Strand Life Sciences. The acquisition adds a significant muscle power to Oncquest and will propel it into an aggressive growth trajectory.

The erstwhile Quest diagnostic's Gurugram facility was built with the best global standards in the year 2008 and is one of the largest Lab facilities in Asia. Quest exited India and sold off its entire India facilities to Strand Life Sciences in the year 2018, from whom it has been now acquired by Oncquest.

The facility, located at A-17, Info City, Sector-34 Gurugram, will be the new Oncquest' s National Reference Laboratory. The facility is NABL & CAP-accredited and can take care of all the segments of pathology testing.

Speaking on the occasion, Aditya Burman, Promoter & MD, Oncquest Labs said, "This acquisition is just the right trigger we needed to catapult our growth plans. We do look forward to many more such synergistic acquisitions to help us ramp-up our operations in India. We are known for providing solutions to "difficult diagnosis" and with this, we hope to consolidate our position further. We are very excited about the possibilities. We look forward to filling the gaps and offer customized solutions at all levels of healthcare platform".
