

Pune gets first advanced technology fertility solution centre

24 October 2020 | News

WHO states that one in every 4 couples in developing nations is affected by infertility

Dropping fertility rates in Maharashtra is a concern now, in 2005 Maharashtra used to have a fertility rate of 2.8 which has gradually come down to 1.7 in 2020. Generally, a level of 2.1 replacement rate is required to maintain the equilibrium in the population with a ratio of 1:1, but Maharashtra is now staring at a new problem of Infertility among men and women of the state.

The World Health Organization (WHO) states that one in every 4 couples in developing nations is affected by infertility. India has nearly 27.5 million infertile couples, and out of which only 1% of the couple come forward to get themselves treated. This is primarily because of the low awareness levels and the myth that the success rate in IVF/Fertility treatment is very low.

Oasis, a Pune-based unit of the Sadguru Healthcare Services Pvt. Ltd., has redefined reproductive care in India by bringing in internationally recognized best practices and protocols in Fertility treatments. Oasis specializes in dealing with clients with previous failed IVF treatments. Through advanced treatments like PGS, Vetrification, micro-TESE success rates can be improved. Oasis treat a lot of couples with history of failed IVF and successfully offer better pregnancy rates.
