

Health Ministry seeking solutions for management of biomedical waste

29 October 2020 | News

Among all the categories of biomedical waste, liquid wastes pose a serious threat to human health and the environment

The Union Minister of Health and Family Welfare, Science & Technology and Earth Sciences, Dr Harsh Vardhan has underlined the need for long term solutions for management of biomedical waste so as to ease the pressure on Health and Environment, specifically in a pandemic like situation. His message was read out at a recent webinar.

“The need for biomedical waste management is quite significant today, there is a need for strict compliance of the rules and regulations already in place for safe disposal of such biomedical waste”, he added while thanking India Water Foundation (IWF) and United Nations Environment Programme (UNEP) for supporting member states, including India, through an environmental strategy to protect people.

The high-level webinar on ‘The Future of Liquid Waste Management amidst COVID-19: What lies ahead?’ was jointly organized by the India Water Foundation (IWF) and United Nations Environment Programme (UNEP) supported by the Department of Science & Technology (DST), Government of India and Department of Drinking Water and Sanitation, Ministry of Jal Shakti recently. The webinar focused on the future of liquid waste management and effective management of biomedical waste.

The main objective was to have a holistic understanding on various facets of waste management in context of COVID-19 along with socio-environmental impacts.

The sudden onset of the COVID-19 pandemic in early 2020 has imposed massive health and economic burdens on communities around the world and affected every sector of society, including the waste-water sector. Among all the categories of biomedical waste, liquid wastes pose a serious threat to human health and the environment because of their ability to enter watersheds, pollute groundwater and drinking water when improperly handled and disposed.

Professor Ashutosh Sharma, Secretary, DST, highlighted about innovations to tackle this waste that have been developed in the last 4-5 months like garbage bins with virus neutralizing inner lining for hospitals by institutions like Sree Chitra Tirunal Institute for Medical Sciences & Technology, Trivandrum. They are now being produced commercially.
