Elan Professional Appliances launches two portable COVID-19 vaccine freezers

10 February 2021 | News

The newly launched products are light weight and can be installed easily.

Gurugram-based Elan Professional Appliances Pvt Ltd has launched two portable COVID-19 Vaccine Freezers – an IoT-enabled Portable COVID-19 vaccine freezer with temperature range from 2 °C to -20 °C and a portable COVID vaccine freezer maintaining temperature only at –86 °C. Both the portable products are equipped with advanced features maintaining efficiency and efficacy of the vaccine.

Sanjay Jain, Director, Elanpro said, “Vaccines are required to be stored at highly specific temperatures to remain effective. Any deviation from this can have an impact on a vaccine’s efficacy and, at worse, render it in-effective. With Elanpro’s portable COVID vaccine freezers, it is an excellent solution in preserving the vaccine's efficacy.”

The newly launched products are light weight and can be installed easily. Additionally, the freezer can also be used for other vaccines. Another benefiting feature of the product is that it can easily be converted into a refrigerator.

The product comes with an IoT-enabled remote which helps in monitoring temperature as per the requirement. The freezer runs on vehicle batteries. Also, this highly advanced product sends a notification via email and SMS if the temperature variance is observed. It is also equipped with an alarm to alert for variance in temperature monitoring. The newly launched product is also embedded with a data logger. These solutions come from 2 litres to 100 litres battery freezers (portable freezers).
