

Alkem Labs launches affordable anti-epileptic drug in India

15 March 2021 | News

Brivasure, Alkem's anti-epileptic drug (AED) is a generic version of the parent molecule

Mumbai based Alkem Laboratories has announced the launch of Brivasure, an affordable anti-epileptic drug for the treatment of epilepsy in India.

Brivasure, Alkem's anti-epileptic drug (AED) is a generic version of the parent molecule. Alkem has launched the drug in the market at price, Brivasure 25mg Rs 79.50/strip, Brivasure 50mg 148.50/strip, Brivasure 75mg 230/strip, Brivasure 100mg 295/strip, post patent expiry of innovator product, of Brivaracetam as on February 21, 2021. The drug has been approved by the Drugs Controller General of India (DCGI) in the adjunctive management of partial onset seizure with or without secondary generalisation. The drug has exhibited faster onset of action, efficacy with favourable safety profile.

Yogesh Kaushal, President, Chronic Business, Alkem Laboratories Ltd, said, "With the launch of Brivasure, we aim to make the treatment of epilepsy easily accessible to the patients at affordable pricing."

Dr Akhilesh Sharma, President and CMO, Alkem Laboratories Ltd, added, "With the introduction of brivaracetam by Alkem, we are optimistic about making steady progress and revolutionising epilepsy treatment in India as well as globally. Levetiracetam has been considered a broad spectrum antiepileptic drug in India but after the clinical usage for over a decade we have learnt that it has got its own disadvantages and is associated with certain behavioural side effects. Brivaracetam seems to be filling up this gap with its promising efficacy which was observed even in those patients who had previously discontinued Levetiracetam due to side effects, benign side effects and simpler dosing regimen making it more convenient and cost effective proposition for the patients.
