Apollo LogiSolutions aims at enhancing COVID-19 vaccine distribution model in India

01 April 2021 | News

Collaborates with supply chainâ??s major players for transparency and better tracking and tracing of Covid-19 vaccines

Apollo LogiSolutions (ALS), an Integrated Logistics solutions provider, has announced that it is collaborating with leading players across technology, cold chain warehousing, pharmaceutical, healthcare, airline and airport sectors for its new ‘integrated vaccine delivery platform’.

Apollo LogiSolutions aims to enhance the current Covid-19 vaccine distribution model in India with its new solution and has already onboarded UNICEF backed blockchain technology firm StaTwig for technology capabilities; Coldman, Kool Solutions and other major companies for effective cold chain warehousing of 70,000+ pallet capacity at 10 locations in India and GMR-Hyderabad airport and Indigo airlines for air transportation.

Apollo LogiSolutions’ ‘integrated vaccine platform solution’ is designed to address the end-to-end supply-chain related challenges and bring more transparency and effective tracking for effective Covid-19 vaccine distribution in the country.

Announcing the new solution, Raaja Kanwar, Vice chairman and Managing Director, Apollo LogiSolutions said, “It’s a proud moment for everyone at Apollo LogiSolutions to have been able to build a solution that will help India in its mission to immunize its people against Covid-19. We have already partnered with some of the most trusted names in the industry and will continue to add more to make the platform more robust as part of our commitment in creating an effective end-to-end distribution platform for the Covid-19 vaccine.”

In addition to the current partners, Apollo LogiSolutions is also engaging with major players in the healthcare and pharma sector alongside various local and central government authorities and ministries to get them on-board.
