This system is provided by HVAC systems is powered and manufactured by Jaitra Devices and Systems LLP, Cherlapally, Hyderabad

Maxivision Eye Hospitals have adopted an advanced one-of-a-kind technology called Bipolar Ioniser that disinfects the hospital premises. An innovative technique that deactivates the virus helps in keeping the premises of a hospital COVID-19 free. This system is provided by HVAC systems is powered and manufactured by Jaitra Devices and Systems LLP, Cherlapally, Hyderabad.

Commenting on the new innovative technology, Dr Kasu Prasad Reddy, Founder & Mentor, Co-Chairman, MaxiVision Eye Hospitals said, "This technology will also be useful for many more hospitals, airports, cinema theatres, malls, bus stations, hotels and areas where the quality of air can get endangered through multiplying bacterias."

Sudheer, CEO, MaxiVision Eye hospitals further added, "At the onset of a second wave, in addition to the social distancing norms, masks, temperature checks, and self-declaration forms we have started taking extra precautions through the use of Bipolar Ioniser which has emerged as the need of the hour."

Lakhs of patients visit MaxiVision hospitals across all the branches and are treated without any complications. This was possible by maintaining the best sanitisation procedures through technology and social distancing
