From cell culture to target protein: exploring the benefits of the 24-well plate workflow

03 May 2021 | Features

BY PALL LABORATORIES

The use of 24-well cell culture plates in laboratory applications is rapidly growing.

Researchers are recognizing the advantages of 24-well filtration workflows to accelerate throughput, save time, and simplify processes in product purification. This new scientific brief reviews the comprehensive nature of Pall’s 24-well filter plate line and explores the benefits these plates provide to numerous workflows.
