JAIN partners with Apollo MedSkills to offer skill-based training to students

05 July 2021 | News

The partnership will benefit students pursuing B Sc and M Sc at JAIN's School of Allied Healthcare and Sciences

JAIN (Deemed-to-be University) in collaboration with Apollo MedSkills (ASML) will offer training to students pursuing programmes at the University's School of Allied Healthcare and Sciences.

This association will allow the students to explore and gain practical experience in the paramedical area through practical labs, on-the-job training/clinical internships across Apollo Group of Hospitals and other associated hospitals.

The training programme will be rolled out to the B Sc and M Sc courses including Medical Lab Technician (MLT), Operation Theatre Technician (OTT), and Dialysis Technician (DT).

The MoU accounts for significant progress in the growth of the university's strategy to make education more accessible while inspiring young students to discover opportunities and meet the ever-growing demand and be a future-ready workforce.

Dr Chenraj Roychand, Chancellor, JAIN (Deemed-to-be University) quoted, "There is a huge scope for paramedical sciences, and we need professionals who can be part of a workforce that will not only support the medical fraternity but also serve the society. And this association with Apollo MedSkills will work towards this cause and prepare the aspiring youngsters who seek to create a huge impact."

Dr Srinivasa Rao, CEO, Apollo MedSkills said, "Consistent with our vision of building future healthcare leaders for India, Jain University and Apollo MedSkills have collaborated to deliver programmes in Healthcare Management and Allied health."
