Interventional Pain and Spine Centre unveils first centre in Bengaluru

10 July 2021 | News

Most procedures at IPSC can be done in a day-care setting at half the cost compared to large hospitals

Interventional Pain and Spine Centre (IPSC), a chain of single-specialty centres offering state-of-the-art spine care and chronic pain management with less invasive techniques, has launched its first centre in Bengaluru on Bellary Road at Shahkara Nagar.

The new facility, equipped with modular operating theaters, is staffed with pain specialists skilled in minimally invasive techniques for the management of chronic pain of all types, including joint pain (knee, shoulder, neck, etc.), low back pain, slipped disc, spondylitis / sciatica, neurology pain, migraine, facial pain, rheumatic pain, and cancer-related pain. It also offers capabilities in the prevention and management of sports-related injuries.

The Centre's regenerative department uses natural cells of the body to repair damaged tissues.

Said Dr. (Maj) Pankaj N Surange, Managing Director and CEO, IPSC: "IPSC offers minimally invasive and target specific techniques with much less risk and trauma than conventional surgery for the management of spinal and chronic pain. For most cases of chronic pain, less invasive interventions are better alternatives to open surgical methods. They are also much safer and don't require hospital admission. Since most of the procedures can be done in a day care setting, we can reduce their cost to almost half compared to large hospitals. Patients can go back home the same day."
