

MVS Engineering sets up oxygen plant at Batra Hospital in Delhi

10 September 2021 | News

This is the first onsite plant at the nearly 500-bed capacity hospital

MVS Engineering has set up an onsite oxygen generation plant at the popular Batra Hospital in New Delhi.

With a capacity of 500 LPM or 30 Nm³/hr, the MVS plant has been estimated to provide sufficient oxygen to around 150 hospital beds.

Delivered ahead of schedule, the MVS OXYMED PSA Oxygen plant is the first onsite oxygen plant installed at the hospital.

"We are happy to have set up and commission this on-site oxygen generation plant at this prominent hospital in the national capital. We are also given to understand that the hospital authorities had conducted rigorous due diligence and reference checks for deciding upon the awarding of this contract," said Siddharth Rastogi, Executive Director, MVS Engineering.

"They have set up the plant much before the stipulated delivery date. We are proud to say that Batra hospital is the first large multispecialty private hospital to set up an oxygen plant of its own," said Dr Pavan Gurha, Chairman Procurement Committee and Head Anaesthesia & Critical Care, Batra Hospital.
