

KareXpert launches SuperApp mobility solution

21 October 2021 | News

Available in both iOS & Android, the app will provide healthcare stakeholders with role-based access controls

KareXpert, the Jio-backed, SaaS-based digital healthcare platform, has unveiled its next-generation mobility solutions to streamline the overall operations of the hospitals done by caregivers and patients using SuperApp technology.

SuperApp is a single mobile app for caregivers and patients, allowing the usage of personnel devices (such as smartphones) and promoting branding for hospitals. The app doesn't require too much storage on the mobile device which has been a major problem with native mobile applications.

KareXpert's SuperApp is bundled with its healthcare platform and comes pre-integrated so that hospitals do not need to perform an additional effort to offer a 10x patient experience.

SuperApp empowers caregivers to provide hyper-collaborative and hyper-coordinated patient care within the workflow-based system. It's available for all types of caregivers such as technicians, registration desk, billing desk, pharmacy desk, phlebotomist, administrators, and patients with role-based access to perform their functions. Moreover, the app is PwC audited and HIPPA compliant, assuring complete data security to its users.
