- Expanding into metropolitan and tier II cities

## **Founder Speaks-**

*"Every allopathic doctor in India caters to at least 1,511 people, much higher than the World Health Organization's norm of one doctor for every 1,000 people. The shortage of trained nurses is even more dire, with a nurse-to-population ratio of 1:670 against the WHO norm of 1:300. As of today, this sector is being promoted by government and change is visible over last decade as renewed focus from the government with a growing market demand for healthcare services and products. In addition, with changing demographics and shift in lifestyle of people, diseases too are becoming common. This has resulted in increased healthcare spending.*

*The Indian healthcare industry reached \$190 billion in 2020, and according to the India Brand Equity Foundation (IBEF), it is expected to reach \$370 billion by 2024-2025, due to increased demand for specialized and higher quality healthcare facilities. COVID-19 has highlighted the importance of healthcare, but sadly Public spending on healthcare spending in India is just 1.2% of GDP.*

*This sector needs innovations and today most of the cutting-edge innovations are changing the face of healthcare infrastructure in India."*

**- Dilip Shankar, Chief Executive Officer, Accord Innovations, Bengaluru**
