- Hiring top talent globally including machine learning (ML), software engineering, product, commercial

Founder Speaks-

"The pandemic and adoption of technology in healthcare has brought a quantum shift in the sector. Over the last couple of years, we have seen some promising tech innovations in the space globally. Digital transformation across industries due to the pandemic has indeed opened tremendous opportunities of leveraging deep tech (AI, ML, Blockchain, etc) to help the overall health tech ecosystem evolve and elevate. With the Indian startup ecosystem truly brimming with excellent talent, we at Suki are very excited to provide a truly global platform to India's tech talent to build for the future of health systems and emerge as the torchbearer of the still nascent SaaS based healthcare technology space in the country. Our vision is to help establish India as a global hub for solving the biggest and most complex healthcare challenges faced by the world today. With world class mentors and industry professionals we are looking for great tech talent from India who can learn and build at a global scale which in return will encourage India's tech talent to venture into healthcare technology as a space to build the best products."

- **Punit Soni, Chief Executive Officer, Suki, US**
