Manipal Hospital Delhi launches Radionuclide Therapy

24 December 2021 | News

For convenient & comprehensive treatment of cancer patients

With an aim to provide comprehensive cancer care, Manipal Hospital Delhi has recently launched the Radionuclide Therapy.

With the introduction of radionuclide therapy (I-131), Manipal Hospital Delhi now boasts of cutting-edge diagnostic modalities and state-of-the-art treatment options for cancer care, making it Dwarka's first Comprehensive Cancer Care Centre.

Radionuclide therapy utilizes radioactive medicines for treatment of various cancers and benign conditions. This facility will be a significant addition to the existing oncological services, making it a holistic oncology facility. What makes it more unique is that with the addition of Radionuclide therapy, the entire spectrum of advanced cancer therapies will be served under one roof. In addition to this Manipal Hospital Delhi will be able to treat all possible forms of cancer.
