InnAccel Tech wins WBG-CES Global Womenâ??s HealthTech awards at CES 2022

10 January 2022 | News

InnAccel Technologies won the award for its next-generation product - Fetal Lite, an AI-powered fetal monitor which can provide accurate readings with limited infrastructure

InnAccel Technologies, a start-up known to develop unique novel globally certified medical devices in India has won the WBS-CES Global Women's HealthTech award at the prestigious Consumer Electronics Show 2022. InnAccel Technologies has been recognized for its pregnancy monitoring product - Fetal Lite.

Fetal Lite is a next-generation, AI-powered, pregnancy monitoring and labour management technology. It has been designed to increase access to adequate and timely pregnancy and labour monitoring at home and in clinical settings across cities and remote rural areas with limited infrastructure. Fetal Lite, based on next-gen ECG signal processing, is more accurate, reliable, and easier to use compared to conventional Doppler-based devices. Fetal Lite will help in reducing the 300,000 annual intrapartum deaths that occur every year in India, due to inadequate monitoring with current technologies.

Through a joint global programme, IFC of the World Bank Group and CES, owned and produced by the Consumer Technology Association (CTA), aim to identify and celebrate innovative technologies that can address gaps in women's health care and safety in emerging markets. Over 70 companies from across the globe applied for these awards and Fetal Lite emerged as a winner after a rigorous selection process.
