Ketto.org invites ideas for Web3 Native Healthcare Ecosystem

21 January 2022 | News

Ketto.org will be offering a $2,500 grant to create a detailed and actionable plan for token development

Ketto.org is exploring a web 3 native healthcare ecosystem. Ketto is determined to revolutionise the healthcare ecosystem, therefore the company is crowdsourcing ideas to create a detailed workable plan for token development.

Ketto needs a brilliant Solana developer to create a plan of action to guide the development of the token. The plan should cover the technical aspects of creating the utility as mentioned in this token research report produced by SuperteamDAO .

The final plan should have below information:

- Outline the system architecture
- Identify the technology stack
- Define token properties
- Design of the smart contract
- Detail how various elements of token functionality will work on a technical level
- Integration with Ketto’s existing systems
- Managing emissions and tokenomics
- Provide an estimate for time and resources needed to complete the development

Participants are requested to write a short one to three-page overview of a general approach. On the basis of that one pager, Ketto will identify and provide the full $2,500 grant to create a detailed and actionable plan.

Additionally, the developer does not need to actually develop the token as a part of this engagement. Rather, he/she needs to create an actionable plan to guide the actual token development. The developer will have access to the Ketto technical team to support them as they execute the plan.
