 - With the launch of the remote homecare monitoring of patients, looking at extending this to Post IPD care.
 - To be present in the majority of the Tier 2 & 3 cities
 - To expand to other geographies such as Malaysia, Indonesia, Philippines and Middle East

Founder Speaks-

"With mobility being a severe constraint, MyHealthcare has been focusing on bringing virtual consults, diagnostics at home, home care, home isolation management and pharmacy at home into a common care ecosystem so that patients and their families have access to doctors from India's leading hospitals and are able to manage all their care needs from the MyHealthcare app. The increased adoption of digital technology by care providers, will improve the access to quality healthcare and make it available to a wider population. Data suggests that an estimated 70% of our country does not have access to quality primary care. Growing startups like MyHealthcare partnering with leading hospitals and clinics in creating scalable healthcare ecosystems, will be a key driver in democratising healthcare in India."

- Shyatto Raha, Chief Executive Officer, MyHealthcare, Gurugram
