Tech startup Aerion Labs unveils head-mounted air purifier in India

25 January 2022 | News

The wearable device is designed to help people suffering from health ailments such as asthma and dust allergies

Aerion Labs, a Coimbatore-based tech startup focused on wearable healthcare technology, has launched a head-mounted air purifier. The wearable device is designed to help people suffering from health ailments such as asthma and dust allergies. R&D and manufacturing of this product are being accomplished with a team entirely from tier-II cities across India.

Some of the salient features of the device are : Filtration of both PM2.5 dust and microbes through a miniaturised electrostatic precipitator; Protection for your entire face including your eyes, nose, mouth, and skin; Uses reusable dust cartridges that can be easily cleaned

Aerion is also developing wearable air purifiers integrated into 2-wheeler helmets and hard hats for use in factories.
