NHA approves DRiefcase's PHR app for ABDM roll out

31 January 2022 | News

DRiefcase will now enable users to share health information under the ABDM framework with doctors and healthcare service providers

DRiefcase, India's first ABDM(Ayushman Bharat Digital Mission) integrated health locker, has become the first PHR (Personal Health Records) app to be approved by the National Health Authority (NHA) for Ayushman Bharat Digital Mission (ABDM) roll-out. ABDM is a digital framework that will connect patients, doctors and other healthcare stakeholders nationwide to facilitate safe and secure movement of health information.

DRiefcase will now enable users to share health information under the ABDM framework with doctors and healthcare service providers. The integration will now allow users to create their own Ayushman Bharat Health Account (or ABHA address) and ensure that the created medical records are issued to the correct individual or accessed by a health information user only after proper consent is granted.

Patients can download the DRiefcase mobile app for free from the App Store or from Google's Play Store to upload, store and share their medical records.
