NephroPlus unveils two apps for better dialysis care

03 February 2022 | News

NephroPlus will conduct occasional quizzes and contests with questions sent as alerts

Hyderabad-based NephroPlus has launched two apps to help provide support for dialysis patients and nephrologists. The first-of-its-kind innovation consists of a Patient App and a Nephrologist App, available on both Android and iOS, where important information related to patient medical history and dialysis, in general, is available at the fingertips.

With the patient app, NephroPlus patients can now book dialysis sessions with just a few taps, book holiday dialysis sessions anywhere in India, get access to the largest directory of dialysis friendly recipes, access prescriptions and investigation results, consult a dietician for free, pay for sessions without having to carry cash and cards to the dialysis centre and book video consults with nephrologists. Nephrologists can see the entire clinical history of their patients through the app.

NephroPlus will conduct occasional quizzes and contests with questions sent as alerts and guests who provide the right answers will win badges that can further be redeemed against services at the centre. This innovation is a welcome development. This app is available to download for both iOS and Android users immediately, bringing convenience to both patients and nephrologists in their journey with NephroPlus.
