US-based Exergen Medical expands presence in India

16 March 2022 | News

Ababil Healthcare is the new distributor for Temporal Artery Thermometers in southern India

Exergen Corporation, US-based player in infrared temperature measurement for medical applications, has signed a distributor agreement with Ababil Healthcare. Based in Chennai, Ababil Healthcare aims to provide high-quality healthcare services and products in 6 Indian states, home to around 275 million people.

The TAT-5000 and the TAT-2000 thermometers for professional use by doctors and nurses and the TAT-2000C thermometer for consumer applications are based on a very innovative infrared technology. They offer many advantages over more traditional methods of determining a patient's body temperature.

“Ababil Healthcare delivers state-of-the-art medical equipment for doctors, nursing homes, and hospitals to manage every critical care department. We are very impressed by the accuracy and ease of use of the Temporal Artery Thermometer”, says Mohammed Ibrahim, CEO of Ababil Healthcare. “At the same time the infrared thermometers designed and manufactured by Exergen are very affordable. We think both doctors, nurses and at-home-users in India will love the Temporal Artery Thermometer series of products”.
