Snowflake launches healthcare & life science data cloud

21 March 2022 | News

Industry-leading customers like Anthem, Health Catalyst, IQVIA, Komodo Health, Novartis, Spectrum Health, and others, are using the Healthcare & Life Sciences Data Cloud

Snowflake, a global data cloud company with operations in Pune and Bengaluru, has announced the launch of the Healthcare & Life Sciences Data Cloud.

With the Snowflake Healthcare & Life Sciences Data Cloud, healthcare companies have a single, integrated, and cross-cloud data platform that eliminates technical and institutional data silos. This will enable organizations to securely centralize, integrate, and exchange critical and sensitive data at scale.

Snowflake ensures high levels of data security and governance, and its built-in capabilities and extended partner network better allow companies to meet compliance requirements and satisfy industry regulations.

By leveraging the Healthcare & Life Sciences Data Cloud, customers including Anthem, IQVIA, Komodo Health, Novartis, Siemens Healthineers, Spectrum Health, and others, are unlocking data to deliver improved patient outcomes and care experiences, optimizing care delivery, and enhancing clinical and operational decision-making.

Additionally, life sciences organizations like Novartis are leveraging the Healthcare & Life Sciences Data Cloud to optimize omnichannel engagement and accelerate time-to-market while collaborating more closely than ever with their healthcare partners.

Within the Healthcare & Life Sciences Data Cloud, Snowflake also offers partner solutions and enables partner-delivered solutions.
