

## Fujifilm India unveils new range of CT, MRI and ultrasound machines in India

28 March 2022 | News

**The enhanced portfolio includes Scenaria View, Supria series, The Echelon Smart and Arietta series**

Fujifilm India, a leader in diagnostic imaging and medical system technology, has unveiled a new range of products at the 74th National Annual Conference of IRIA 2022.

The latest portfolio includes a plethora of products offering complete and integrated solutions for diagnostic purposes including CT, MRI, X-ray, AI, PACS, endoscopy and ultrasound systems through the *Scenaria View, Supria series, The Echelon Smart and Arietta series*

Scenaria View (128 slice CT Solution) is a CT solution that provides dependable routine application capabilities with available advanced clinical modules for Interventional CT, extended coverage Shuttle Scanning (for Perfusion Exams), Cardiac CTA and Dual Energy examinations.

Supria (32/128 CT Solution) is an evolved CT device, employing the latest technologies such as whole-body sub-millimetre imaging and dose reduction technologies.

The Echelon Smart (1.5T Superconductive MRI) is based on Fujifilm's proprietary technology, and opened the potential for 1.5T systems, providing superb image quality and superior install flexibility, inherited from permanent-magnet MRI systems. It comes with noise reduction technology for a patient-friendly examination.

The ARIETTA (Series of Ultrasound) is designed to provide high-quality imaging across a broad clinical range that includes abdominal, cardiac, and vascular applications.
