Rossari Biotech unveils nanotech-based antimicrobial surface coating

26 April 2022 | News

Dr Nanoxa is NABL certified and is efficient against COVID-19

Mumbai-based Rossari Biotech has announced the launch of Dr Nanoxa, a new age antimicrobial surface coating infused with nanotechnology which provides bio-security from residual infections caused by bacteria and viruses including SARS CoV for 30 days.

The product is made in India and has successfully been tested by National Accreditation Board for Testing and Calibration Laboratories (NABL) certified laboratories using international standards and has proven to inactivate urinary tract infection (UTI) causing bacteria and SARS-CoV-2 (Coronavirus) for 30 days of application. The product has an environment-friendly coating which takes away the negative effects of the chemicals.

Initially, the company will be launching with a 200 ml spray bottle for the B2C segment and five-litre cans along with empty spray bottles for the B2B/institutional segment. The product comes as a perfect solution since it provides effective protection against Coronavirus (SARS-CoV-2).

The product will be available across various e-commerce marketplaces. It is very easy to use as it comes in a spray bottle and the active ingredients in Dr Nanoxa are a mixture of metal nanoparticles, encapsulated in an intelligent polymer chain to give tri-layer prolonged protection from harmful microbes for up to 30 days. These metal nanoparticles have long been recognised as antimicrobial agents. Combined with nanotechnology, they ensure prolonged protection.
