Teleradiology Solutions inks agreement with AMTZ

27 April 2022 | News

Teleradiology services will be provided for the government sector

Bengaluru-based Teleradiology Solutions (TRS) has signed an agreement with Andhra Med Tech Zone (AMTZ) to establish a hub in the zone dedicated to providing remote radiology image reads focussed on government sector and public sector by expert radiologists supported by innovative artificial intelligence (AI) solutions.

Through this hub, AMTZ and TRS will reach out to pan-India government hospitals, state-wide rural health centres (including those under the National Health Mission), and public sector undertakings with hospitals where TRS will provide remote radiology services. A health cloud is conceptualised, which will ensure that all this radiologic data is archived in a central location for all government hospitals across India so that research institutions may use the data to conduct research projects.

The agreement was signed by Dr Jitendar Kumar Sharma, MD & CEO, AMTZ, and Kishor Joshi, Chief Business Officer, TRS, in the presence of senior management from both the organisations.
