GeneStore unveils facility for molecular diagnostics and proteomics

29 April 2022 | News

The facility is dedicated to the development and manufacturing of RT-PCR kits for infectious diseases such as tuberculosis, HIV, dengue etc

GeneStore's Founder, Anubhav Anusha, has announced the launch of the company's Center of Excellence for Molecular Diagnostics and Proteomics in Gurugram, Haryana.

The facility is dedicated to the development and manufacturing of RT-PCR kits for infectious diseases such as tuberculosis, HIV, dengue, Hepatitis C, Japanese Encephalitis Virus that contribute to a high public health burden in India.

GeneStore's mission in India is to support the government in drastically lowering healthcare costs related to diagnostic testing for infectious diseases through its highly affordable RT-PCR testing kits.

"We have a pipeline of RT-PCR diagnostic kits for over 80 infectious disease pathogens that are relevant across diverse regions across India and the world," Anubhav Anusha, Founder, R&D Head and Global CEO of GeneStore.
