DAMS lays focus on simulation-based medical education

02 May 2022 | News

Launches eMedicoz app that helps to bridge the gap among medical students

Delhi Academy of Medical Sciences (DAMS) has launched simulation-based medical education at its Delhi centre. The innovative idea of simulation-based education enhances the students from all perspectives- it provides a structured, learner-centred environment in which novice, intermediate, and advanced practitioners can learn or practice skills without causing harm to patients.

The innovation of eMedicoz app helps to bridge the gap amongst medical students preparing for various career opportunities at the post-doctoral level and provides them with a common platform where they can get all useful information in one place and prepare for common national level examinations like NEET-PG, NEXT.

Through this app, students get the opportunity to discuss medical cases with their seniors and peers across the world.
