Eka Care forays into Lucknow

10 May 2022 | News

Eka 360 Degree Clinic Management suite is integrated with Google MyBusiness which gives doctors tremendous online visibility

Eka Care, a connected healthcare platform, has forayed into Lucknow.

“We are excited to expand in Lucknow. Eka Self-Assessment Module and AI-Driven Prescription Pad are the key innovations which are helping doctors to save and spend more time with their patients. Eka 360 Degree Clinic Management suite is integrated with Google MyBusiness which gives doctors tremendous online visibility, driving direct appointments and offering a better experience to their patients. We look forward to working alongside the doctors in Lucknow, helping them to help us," said Mohit Rajpal, Founding Member at Eka Care.

In order to issue a Health ID to an individual, Eka Care will require basic demography and contact details and pass them on to the ABDM system. The ID will be used for uniquely identifying persons, authenticating them and maintaining their own and family’s health records across multiple systems and stakeholders.

The platform which is available in 12 languages enables every Indian family to create multiple health profiles, and store health records such as vaccination charts for kids, developmental milestones, prescriptions, lab reports and scans.
