GE Healthcare opens 5G Innovation Lab in Bengaluru

07 July 2022 | News

The lab will serve as a testbed to develop future-ready products and solutions, turning a new corner in innovation

GE Healthcare has launched its 5G Innovation Lab in India, the first for GE Healthcare across the globe. Situated at the John F. Welch Technology Centre (JFWTC) Bengaluru, GE Healthcare's largest R&D centre outside of the US, the lab will serve as a testbed to develop future-ready products and solutions, turning a new corner in innovation.

It houses state-of-the-art infrastructure, including a private 5G network for testing and development. It provides expertise as well as a platform for a collaborative ecosystem for academia, the healthcare industry, and startups, facilitating exploration and enabling validation and qualification of 5G-enabled Precision Healthcare use cases.

The GE Healthcare 5G Innovation Lab will serve as a conduit for the interplay of exponential technologies like AI/ML, IoT, Big Data, Edge Computing and Cybersecurity.
