Holborn Wells India develops Monkeypox RT-PCR detection kit

15 July 2022 | News

The kit can detect the virus with high sensitivity and produces results within 90 minutes

Holborn Wells India has developed a real-time PCR kit for the detection of the monkeypox virus (MPXV) in response to the recent spread of the virus in various countries. The test has been developed in coordination with Holborn Wells, UK.

Holborn Wells Monkeypox Real-Time PCR detection kit can detect the virus with high sensitivity and produces results within 90 minutes.

Over the last few weeks, multiple clusters of the monkeypox virus have been reported across the world. Early diagnosis using such assays are important to assist scientists and monitor such emerging infectious disease threats.
