

Merck invests €200,000 in microbiology application lab in Bengaluru

21 July 2022 | News

Supports capability built-up in microbial quality control in pharma, and biopharma industry

Merck has announced the opening of its first Microbiology Application and Training (MAT) Lab in Jigani, Bengaluru, offering facilities and technical expertise to support the Indian life science community on microbial quality control capability development.

With an investment of €200,000, the MAT Centre spans an area size of 1,100 sqft. The testing services offered in the Lab include sterility testing, rapid bioburden testing, pyrogen testing, advance membrane filtration and other pharma QC microbiology applications.

The MAT Lab includes a vibrant space for certified training, application support, feasibility studies and method development for Pharma and Biopharma industries.

The Lab offers customizable solutions and services that help pharmaceutical and biopharma companies as well as regulatory to improve their processes from drug discovery, development to manufacturing.
