HealthPlix launches SmartScan for faster diagnosis

05 September 2022 | News

The feature will convert physical reports into digital format

Bengaluru-based HealthPlix Technologies has launched SmartScan which automatically scans patient lab reports, structures health vitals, and populates them on the electronic medical record (EMR) platform for doctors.

The company has tapped into the latest artificial intelligent (AI)-powered Optical Character Recognition (OCR) technology and developed the feature in-house to equip doctors with advanced patient health information at the point of care.

HealthPlix - SmartScan sits on the solid foundation of inbuilt intelligence of 100+ lab test templates to ensure the accuracy of the health vitals populated in the EMR - thereby making it future-ready. On average, a doctor takes six to eight minutes to understand the patient's health history and analyze the physical test reports. SmartScan will reduce that time by 30-40 per cent and solve doctors' pain point of reviewing physical lab reports.
