HealthEMAI teams up with Marquee Dental Partners

20 September 2022 | News

The partnership will combine Marquee's expertise in providing dental care services with HealthEM.AI's award-winning AI capabilities

HealthEM.AI, a mission-driven data platform company dedicated to improving care delivery, has announced its partnership with US-based Marquee Dental Partners. Marquee, a leading dental service organisation, provides dentists with both the support and the clinical autonomy they need to succeed.

The partnership will bring together the best of both worlds, combining Marquee's expertise in providing dental care services with HealthEM.AI's award-winning artificial intelligence (AI) capabilities. This will equip dentists with insights from patients' health data and lead to improved clinical outcomes.

"Our goal is to efficiently arm doctors with a set of insights regarding each patient's current overall and oral health. Insights that are predictive in nature allow doctors to take preventative steps today to avoid future health problems," said Fred Ward, Chief Executive Officer at Marquee Dental Partners. "Coupling a patient's current health situation with a dentist's diagnosis using artificial intelligence will make this a reality. Patients should experience lower healthcare costs and enjoy improved overall health.

"As AI advances, dental care services will become more precise, providing proactive and contextual interventions at the right time to improve the patient experience", said Pradeep Kumar Jain, Chief Product Officer, HealthEM.AI.
