Indira IVF to offer AI technology for improving pregnancy outcomes

25 October 2022 | News

With the aim of improving IVF outcomes for patients in India and globally

Indira IVF will be rolling out the latest in Artificial Intelligence (AI) technology across their 100+ clinics in India in November 2022. This AI technology, called Life Whisperer, has been tested in a number of international clinical studies and been shown to help patients get pregnant sooner and more affordably.

Life Whisperer analyses images of patient embryos to assess their quality, supporting the embryologist in selecting the embryo most likely to lead to a successful outcome.

Life Whisperer, a product of AI healthcare company Presagen, uses AI to assess two embryo quality metrics. Life Whisperer Viability assesses how likely an embryo is to lead to a pregnancy, and Life Whisperer Genetics non-invasively assesses embryo genetic integrity.

The tool is currently authorized for sale in over 40 countries worldwide, with India as a key market. Life Whisperer is backed by extensive scientific evidence, clinical data, and numerous recent publications, including two in Nature Scientific Reports, two in Human Reproduction, and a recent paper in Reproductive Biomedicine Online (RBMO), and is regularly presented at global fertility meetings conducted by the European Society of Human Reproduction and Embryology (ESHRE) and the American Society for Reproductive Medicine (ASRM).
