

Carestream Health India introduces new mobile X-ray system for radiography examination

02 February 2023 | News

Balanced and articulating arm suitable for any kind of projection with better access to patients

Carestream Health India has launched its high-powered 'Carestream Motion Mobile X-ray system' at the recent Indian Radiology and Imaging Association (IRIA) meeting at Amritsar. The system is fully equipped to carry out a full range of general radiography examination. The new portable imaging system is compact and easy to maneuver into tight spaces. Innovative features such as a tube-head and articulating arm for excellent visibility and easy use.

The system includes an eight-inch touch screen intuitive monitor with easy-to-set protocols, hand switch exposure control, a manual light-beam collimator. These allow fast, accurate patient positioning. In addition, a 32 KW capacitor discharge generator supports a full range of clinical applications. An optional dose-area product (DAP) meters information essential for monitoring dose.

Edwin Pinto, XRS Business Manager - India Cluster at Carestream Health India said, "The new mobile system is designed to equip imaging facilities of all sizes with the ability to efficiently capture high quality diagnostic images. This system perfectly compliments our high-end premium 'Revolution Plus' system, delivering the same high quality images where budget is a

constraint."
